Purpose

This guide supports procurement officers, project leads and decision-makers to understand the concept of enduring community value (ECV) and the role of procurement, including contract management, to facilitate ECV. This guide should be read in conjunction with the [Queensland Procurement Policy 2026](#) (QPP) and your agency's procurement policies and/or procedures.

Enduring community value

Why

Principle 1 of the QPP reinforces that value for money is more than just the lowest price, and is about considering the most advantageous combination of cost, non-cost factors and purposeful public procurement outcomes in meeting the needs of government, people receiving government services, and the taxpayer. The rising cost of living, impacts of climate change, the need for governments to do more with less and contemporary community expectations on ethical sourcing practices, have driven a greater focus on how procurement can be used to create long-term value for the community.

ECV is a policy mechanism that enables buyers to leverage government procurement to deliver on what is needed today, while creating long-term economic, environmental, social and governance value for Queenslanders now and into the future through purposeful public procurement choices. In other words, it is about going above and beyond the minimum requirements, to leave a positive legacy.

Pursuing ECV aligns with community expectations on the role of government in advancing the public interest. It also promotes human rights as legacy outcomes are people focussed and centred around a strong vision for a more inclusive, sustainable and connected society.

Queensland's asset portfolio and forward procurement pipeline, and the Brisbane 2032 Olympic and Paralympic Games, present excellent opportunities to create ECV. While ECV has a strong alignment with legacy outcomes sought through the Brisbane 2032 Olympic and Paralympic Games, this guide focusses on broader ECV opportunities that may be present in all major projects.

What

The QPP defines ECV as the 'long-term economic, environmental, social and governance value to current and future generations of Queenslanders and is created through purposeful public procurement choices'.

What ECV looks like and its respective time period will differ for each procurement. As a general rule, a long-term view of more than 10 years should be taken where possible. This necessitates robust planning and forecasting, noting that ECV outcomes will be subject to, and may evolve, as new challenges or opportunities emerge over time, which could be driven by a range of factors (e.g. geopolitical, economic, environmental, social, governance).

With a focus on *long-term* economic, environmental, social and governance value, ECV complements existing procurement policy mechanisms to advance multiple strategic pillars of the QPP. For example, while supporting local, small and family businesses and medium enterprises may be a key priority for a major project, applying an ECV lens on this may result in the buyer seeking commitments from suppliers on how further training and career pathways may be provided to those from disadvantaged backgrounds in emerging sectors to support long-term social outcomes post-completion of the project.

How

Rule 20 of the QPP requires agencies to, for significant procurement, apply a purposeful public procurement evaluation criterion. For this criterion:

- between two and four of the 12 purposeful public procurement outcomes as listed in the Rule must be selected for consideration in the criterion to support achieving Part 1 of the QPP, depending on the outcomes pursued as part of the procurement strategy
- a maximum weighting of between 10 and 20% of the total must be applied. For each selected outcome, each individual criterion weighting must be between 5 and 10%.

'Enduring community value, including housing availability and affordability' is one of 12 purposeful public procurement outcomes listed in Rule 20 of the QPP.

Although any procurement can potentially create ECV, significant procurement present particular opportunities in this area. This requires ensuring procurement's role is collaborative and future-focused rather than transactions-based.

In summary, to progress ECV opportunities, agencies should:

- identify these opportunities
- determine whether procurement is the most appropriate vehicle to progress these opportunities
- and if so, ensure these are reflected in procurement documentation (e.g. procurement plans, invitation documentation, contract documentation) and managed as part of contract delivery.

Agencies should consider the following to enable implementation:

- Supporting procurement decision-makers to engage early with key stakeholders at the investment planning stage.
- Updating procurement and major project policies and procedures to support incorporation of ECV opportunities.

Engaging early with key stakeholders at investment planning stage

Why

Identifying ECV opportunities and determining whether procurement is the most appropriate vehicle to progress the same requires procurement decision-makers to engage with key stakeholders at the early stages of investment planning.

For the purpose of this guide, investment planning means activities related to strategic planning for the organisation through to planning for a major program or project.

Key stakeholders

Key stakeholders that procurement decision-makers may engage with include:

- teams responsible for business, investment, program and/or project planning (collectively known as 'investment planning teams')
- relevant procurement Category Councils
- agencies responsible for government targets and objectives
- industry representatives
- other Queensland Government agencies
- other local, state, national and international government agencies
- community groups.

When

It is recommended that engagement commence as early as possible. This could be as early as during strategic planning for the organisation, through to the planning phase for major programs and projects (e.g. during the strategic assessment of needs stage, or development of the program or project brief) as highlighted in yellow against a sample of project and building frameworks used in the Queensland Government in **Table 1** below.¹

¹ There are other frameworks used in the Queensland Government. This includes, for example, the Digital Investment Governance Framework. Further information available here: <https://www.forgov.qld.gov.au/information-technology/queensland-government-enterprise-architecture-ggea/digital-investment-governance-framework>.

Table 1: Sample of Queensland Government project and building frameworks

Generic major project delivery process (derived from QT <u>Project Assessment Framework</u>)	Building Construction and Maintenance category-related major project delivery process (derived from <u>Queensland Government Building Policy Framework – Growth and Renewal</u>)	Transport Infrastructure and Services category-related major project delivery process (derived from DTMR <u>OnQ Project Management Framework</u>)
Strategic Assessment of Service Requirement	Stage 1: Needs Assessment	Business, portfolio or strategic planning
Preliminary Evaluation	Stage 2: Planning	Portfolio management
Business Case Development	Stage 3: Acquisition	Program management
Supply Strategy Development	Stage 4: Commission	Project management
Source Suppliers	Stage 5: Operate, maintain and monitor performance	
Establish Service Capability	Stage 6: Asset evaluation and future need	
Deliver Service		
Benefits Realisation		

How

To support early, effective strategic engagement, procurement decision-makers need to be recognised as a trusted, strategic partner.² The outcomes of engagement will inform the following pre-procurement considerations for a major project:

- defining the goal(s) of the major project, including ECV-related
- conducting a project local needs analysis to refine ECV-related project goals
- identifying and validating ECV-related project goals which can be facilitated by procurement (refer to the [‘Identifying ECV procurement opportunities’](#) section of this guide).

Defining the goal(s) of the major project, including ECV-related goals

This involves a holistic consideration of what the major project seeks to achieve, including analysis of:

- what ECV can be pursued throughout the major project (from planning, design, construction, commissioning, operation through to maintenance)
- an assessment of the time period, costs, benefits and risks (including unintended consequences – e.g. impacts to housing stock/affordability, over-reliance on government work).

In identifying what ECV can be pursued throughout the major project, agencies may consider how the project supports legacy-related objectives. At a minimum, this should be aligned with long-term strategies and plans from the Queensland Government (e.g. [2032 Delivery Plan](#)). To supplement this, agencies may also refer to strategies and plans from international organisations (e.g. United Nations Sustainable Development Goals).³

Note agencies may refer to a variety of frameworks to help guide what ECV could look like. Examples have been provided in **Appendix 1** as a resource to help guide agencies in this process. Agencies may wish to refer to other resources as applicable, for example whole-of-government and/or agency strategies and plans.

For case studies on what ECV could look like in major projects, refer to **Appendix 2**.

Conducting a project local needs analysis to refine ECV-related project goals

The project local needs analysis helps to form a picture of what the local community looks like and what its future needs are. It will underpin a targeted approach that maximises value, and should cover demographic trends, inequalities, experiences and expectations, supply and demand of services, gaps and priorities. This may also involve

² See X Nougues, M Schebitz, T Rochet and T Grunwald-Henrich, *Transformative trends shaping the future of procurement*, Oliver Wyman, 2026, <https://www.oliverwyman.com/our-expertise/insights/2025/apr/7-transformative-trends-shaping-future-of-procurement-cpos.html>.

³ For example, refer to the Thames Tideway project managed by the Tideway Group in the United Kingdom where 54 of the project’s legacy commitments were mapped against the United Nations Sustainable Development Goals. See *Sustainability Report 2022*, The Tideway Group, 2022, <https://www.tideway.london/media/5689/tideway-sustainability-report-2022.pdf>, Pages 7-8.

consideration of impacts from future projects.¹

For example, in one area low employment rates for young people might be an issue, and in another area crime, poor air quality, or mental health may be a priority.²

Identifying ECV-related project goals which can be facilitated by procurement (refer to the '[Identifying ECV procurement opportunities](#)' section of this guide)

To do this, it is necessary to have a clear understanding of the remit of procurement, and how it can support the achievement of identified ECV-related project goals. It is recommended that this be explored in consultation with key stakeholders as outlined in the '[Why](#)' section of this guide.

Some ECV-related project goals may be more appropriate to be progressed outside of procurement. For example, if an ECV opportunity involves partnering with local charities or community groups (which may or may not be within the boundaries of the project site), the project owner may facilitate this via a grant arrangement.

Identifying ECV procurement opportunities

Through comprehensive planning, research and engagement, opportunities for ECV-related project goals which can be facilitated by procurement can be identified. Pursuing ECV outcomes can contribute to meeting government objectives, targets and/or commitments outlined in Part 1 of the QPP.

Not all ECV outcomes need to be progressed in any one procurement – it will depend on its nature, value and risk. The project local needs analysis mentioned above, along with a supply market analysis and any relevant category strategies, will help to identify which ECV outcomes are appropriate. Examples of ECV outcomes that can be facilitated by procurement include, but are not limited to, the following:

- Local jobs supported from the building of assets or creating new long-term manufacturing sector jobs.
- Breaking the cycle of unemployment for disadvantaged job seekers in regional areas.³
- Ensuring well-planned public spaces are contained in specifications for major projects as appropriate.
- Assets which are long-term energy efficient and contribute less waste to the environment over time.
- Maintaining environmental sustainability through best practice environmental management.
- Positive relationship development between community, government agencies and other stakeholders.
- Identification of opportunities to grow supplier diversity in the supply chain or local community.
- Creating opportunities for entrepreneurship and innovation-driven enterprises to start, stay and scale locally for supporting economic growth and job creation.
- Ensuring skills and training opportunities are leveraged for the long-term benefit of local communities and the broader workforce, and are aligned with relevant whole-of-government workforce strategies.

Incorporating ECV procurement opportunities - procedural considerations

Once ECV-related project goals which can be facilitated by procurement are identified, procurement should ensure that these are appropriately captured within invitation and contractual documentation.

Plan

- Incorporating relevant ECV-related project goals as a procurement objective, as part of a procurement strategy (i.e. define what is ECV for your particular procurement), aligning with relevant legislation, the QPP, category strategies, agency procurement plans and/or policies impacting procurement.

With ECV, it encourages buyers to think 'outside of the box' and be future-focused, to ensure major projects' procurement activities support broader, long-term outcomes.

For example, while supporting local jobs may be a key priority for a major project, applying an ECV lens on this may result in the buyer seeking long-term commitments from suppliers on how further training and career

¹ See J Sykes, J Dobson, C Behar, C Ramsden, A Crudgington and C-A Heulin, *Maximising Social Value from Infrastructure Projects*, Useful Projects, 2020, https://www.uts.edu.au/sites/default/files/2023-12/Maximising_social_value_from_infrastructure_projects_v1.1.pdf, Page 10.

² See J Sykes, J Dobson, C Behar, C Ramsden, A Crudgington and C-A Heulin, *Maximising Social Value from Infrastructure Projects*, Useful Projects, 2020, https://www.uts.edu.au/sites/default/files/2023-12/Maximising_social_value_from_infrastructure_projects_v1.1.pdf, Page 10.

³ Undertaking social procurement can contribute to ECV outcomes. Resources are available to assist buyers to undertake social procurement at <https://www.forgov.qld.gov.au/finance-and-procurement/procurement/procurement-resources/consider-social-procurement>.

pathways may be provided to those from disadvantaged backgrounds in emerging sectors post-completion of the project.

Achieving a procurement strategy with ECV outcomes may also require consideration of innovative delivery models where the supply chain is incentivised to deliver added value to the buyer (e.g. concession contracts, unbundling, Public Private Partnerships, Alliance contracting).

- Engage early with industry on the procurement strategy options and how ECV can be delivered. Agencies can reach out to the [Department of State Development, Infrastructure and Planning](#) (DSDIP) to develop tailored industry engagement strategies and DSDIP also plays a role in industry capability development.
- Identifying potential roles and responsibilities, including how data on ECV outcomes will be collected, and performance tracked and reported. This may be considered through the contract management framework or through a project's overarching benefits realisation framework.⁴

Source and evaluate

- Outlining in invitation documentation government's intent to seek ECV outcomes, in addition to the business need. Reflecting this intent through applying the purposeful public procurement evaluation criterion, selecting enduring community value as a purposeful public procurement outcome to be pursued and allocating an appropriate weighting consistent with Rule 20 of the QPP.
- In adjusting the overall weightings for all evaluation criteria, including the purposeful public procurement evaluation criterion, this involves considering a range of factors to ensure a value for money outcome. These factors include, but are not limited to, the following:
 - the purposeful public procurement evaluation criterion weighting requirements in Rule 20 of the QPP
 - procurement objective and strategy
 - outcome of the project local needs analysis and supply market analysis
 - any weightings used in previous similar procurement
 - outcome of consultation with, and alignment with category strategy prepared and endorsed by, the relevant Category Council
 - weighting allocated to other evaluation criteria.
- Preparing outcome-based evaluation questions to elicit innovative commitments by asking suppliers to respond with long-term positive impact solutions.
- Planning for a robust and defensible evaluation methodology. Refer to the [Evaluating offers guide](#) for further information.

Where an outcome-based response is sought, this will require time and collaboration amongst procurement and investment planning teams to carefully consider and articulate how each response will be scored.

- Provide forward notice of the procurement opportunity through the [Queensland Government Forward Procurement Pipeline](#).

Buyers may also require head contractors to advertise any opportunities on [QTenders](#) or [eTender](#).

Award

- Embedding commitments made by the supplier in the contract.
- Use of specific key performance indicators is recommended, combined with adding ECV commitments as a standing agenda item for supplier meetings.
- Including in the contract potential roles and responsibilities, including how data on ECV outcomes will be collected, and performance tracked and reported.

⁴ See 2024 Project Assessment Framework, The State of Queensland (Queensland Treasury), 2024, <https://s3.treasury.qld.gov.au/files/paf-benefits-realisation.pdf?v=3>.

Manage

- Preparing a contract management plan. Refer to the [Contract management guide](#) for further information.
- Tracking and reporting on performance against commitments (e.g. developing reporting tools and processes for contractors to report to the agency). Refer to the [Contract management guide](#) for further information.

Focus should not only be on quantitative data, but also qualitative data (e.g. case studies) as it enables a narrative to be told.

In the case of designing ECV reporting for a contractor and subcontractor(s) arrangement, where practical, reporting should be the responsibility of the contractor as the burden of extending ECV reporting to a subcontractor needs to be taken into account, particularly where the subcontractor is a small business.

- Promptly addressing contract risks and issues and escalating where necessary.
- According to Rule 41 of the QPP, all agencies, including category leads, must provide relevant procurement-related data as prescribed by the Queensland Procurement Policy Reporting Framework in Part 1 of the QPP to Queensland Government Procurement and/or policy impacting procurement sponsor agencies.
- For more information refer to your agency's central procurement unit or head of procurement, or [Queensland Government Procurement](#).

Provide relevant information for project benefits realisation reporting (as part of the Project Assessment Framework stages) where this avenue has been identified in the project planning phase for reporting on ECV outcomes.

Appendix 1 – Example frameworks

Example 1 - National Themes, Outcomes and Measures (TOMS) Framework (Social Value Portal, United Kingdom)

The TOMS Framework was developed by the Social Value Portal, a social impact company based in the UK, to support the public and private sectors to measure and report on social value. Initially delivered as a solution for the *Public Services (Social Value) Act 2012*, the TOMS Framework has evolved into a social value measurement standard across the UK.

The TOMS Framework includes social value measures designed to maximise impact across five key themes – jobs, growth, social, environment and innovation. The TOMS Framework also contains key performance indicators to help measure, track, manage, and improve on social value.

An example of the TOMS Framework is outlined in **Table 2** below:

Table 2: Example TOMS Framework

Themes	Outcomes
Jobs: Promote Local Skills and Employment	More local people in employment
	More opportunities for disadvantaged people
	Improved skills for local people
	Improved employability of young people
Growth: Supporting Growth of Responsible Regional Business	More opportunities for local small and medium enterprises (SMEs) and voluntary, community and social enterprises (VCSEs)
	Improving staff wellbeing
	Ethical Procurement is promoted
	A workforce and culture that reflect the diversity of the local community
	Social value embedded in the supply chain
Social: Healthier, Safer and more Resilient Communities	Crime is reduced
	Creating a healthier community
	Vulnerable people are helped to live independently
	More working with the community
Environment: Protecting and Improving Our Environment	Climate impacts are reduced
	Air pollution is reduced
	Better places to live
	Sustainable Procurement is promoted
Innovation: Promoting Social Innovation	Other measures

Agencies may refer to this table to develop fit-for-purpose ECV outcomes, for example if innovation is identified as a key outcome:

- Theme: Innovation: Promote Entrepreneurship and Increase Supply Chain Resilience
- Outcome: More innovation-driven enterprises start, stay and scale locally; more diverse supply chain; greater adoption and diffusion of new technologies; increased productivity.

Example 2 – Social Procurement Framework (Victorian Government, Australia)

The Social Procurement Framework 'aims to ensure value for money considerations are not solely focused on price, but encompass opportunities to deliver social and sustainable outcomes that benefits the Victorian community'. It applies to Victorian Government departments and agencies when they procure goods, services and construction.

The Framework contains mandatory buyer requirements and recommended actions for inclusion of social and sustainable objectives into procurement. Buyers are expected to decide which social and sustainable objectives are to be pursued and prioritised in each procurement. These social and sustainable objectives relate to themes such as:

- Social enterprises, Australian Disability Enterprises and Aboriginal businesses
- Disadvantaged communities
- Gender
- Disability
- Family violence leave
- Fair and safe workplaces
- Environmental sustainability
- Climate change.

These recommended actions are scaled against the location and/or value of the procurement. It includes examples of programs with intergenerational benefits – like the Public Tenant Employment Program. Further details of these recommended actions are presented on the Victorian Government's 'Social Procurement Framework requirements and expectations' webpage.

<https://www.buyingfor.vic.gov.au/social-procurement-framework-requirements-and-expectations>.

Example 3 – Gold Coast 2018 Commonwealth Games (Queensland, Australia)

The Gold Coast 2018 Commonwealth Games legacy report ([GC2018 Legacy: Beyond the Games report 2024](#)) assessed the benefits over the first five years following the Gold Coast Commonwealth Games against key objectives in the associated Games Monitoring and Evaluation Framework. This included assessment of success against key themes including:

1. Our economy - leveraging opportunities to strengthen Queensland's economy and grow business and employment.
2. Our lifestyle – leading our community to a more healthy, active and sustainable lifestyle.
3. Our community - maximising opportunities GC2018 presents to celebrate our diversity and promote community cohesion and pride.
4. Other benefits (such as legislative change that has had legacy benefits for Queensland businesses).

While this guide uses the general rule of a long-term view of more than 10 years for consideration of ECV, this report may assist agencies in understanding what ECV could look like and for identifying potential roles and responsibilities for how data on ECV outcomes will be collected, and performance tracked and reported.

Appendix 2 – ECV and major projects

Case study 1 - Thames Tideway Tunnel (Tideway Group, United Kingdom)

The Thames Tideway Tunnel is a £4.5bn project delivered by Tideway, a company owned by a consortium of investors, with more than two million pensioners having an indirect investment in Tideway through UK pension funds managed by those investors. Preparatory work on the project began in 2015 with completion anticipated in 2025.

The consortium's backing fulfils a key component of the Her Majesty's (HM) Treasury's National Infrastructure Plan, designed to finance the development of UK infrastructure with the support of highly experienced private investors.

While the primary purpose of the project is to reduce sewage overflows into the River Thames, Tideway has gone beyond to develop a legacy program aligned with its vision for the project to reconnect London with the River Thames.

The legacy program sets out 54 legacy commitments across five themes (environment; health, safety and wellbeing; economy; people; place) aligned with the UN Sustainable Development Goals that it intends to deliver during and after construction. Legacy commitments of note include:

- Minimise carbon footprint.
- Infrastructure supports biodiversity.
- Lorry and vulnerable road users' initiatives.
- Support the London Living Wage.
- Create employment opportunities for the workless.
- Work with charities to employ one ex-offender per 100 staff.
- Connect people of reduced mobility with the river.
- Contractors' local community investment activities.

Procurement features heavily as a vehicle to deliver the ECV commitments, underpinned by Tideway's commitment to the values of safety, legacy, collaboration, respect and innovation which it expects its suppliers to adhere to.

Case study 2 – Queensland Train Manufacturing Program (Queensland Government, Australia)

The Queensland Government's Queensland Train Manufacturing Program (QTMP) was established to meet the increasing demand for rail transport in South East Queensland over the next 10 years.

The QTMP will build 65 new six-car passenger trains at a purpose-built manufacturing facility at Torbanlea, in the Fraser Coast region.

As part of the program a new rail facility will also be constructed at Ormeau, in the Gold Coast region.

The QTMP will support South East Queensland's population and economic growth, as well as Cross River Rail and the Brisbane 2032 Olympic and Paralympic Games.

An ongoing co-design process with the disability sector is shaping the new QTMP trains to ensure compliance, functionality, and accessibility for all passengers.

Construction of the facilities, trains, and maintenance of the fleet will support Queensland jobs now and into the future. The program also brings with it a pipeline of training and development opportunities.

The benefits of the QTMP include increased capacity, improved network efficiency, contribution to the economy and regional growth.
